

Project Design Phase
Proposed Solution Template

Date	01 October 2026
Team ID	6ab7f80ad083b0e2ee72b17e
Project Name	EduGenie: Google Gemini Powered Learning Assistant
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	• Students find it difficult to identify what they already understand, what they have missed and which topics need more attention. • Students struggle to organise study time around subjects, deadlines, priorities and available hours. • Students find it hard to track their learning progress and to get academic help that stays relevant to their current subject and study context. • Online resources are generic, scattered and not personalized, which leaves students confused, less confident and unprepared for exams.
2.	Idea / Solution description	• EduGenie is an AI-powered learning assistant built on Google Gemini that goes beyond basic question answering. • Adaptive diagnosis: short checks that find the learner's knowledge gaps. • Smart study planning: a realistic, personalized plan and roadmap built from subjects, deadlines and available time. • Multimodal explanations: simple, level-appropriate explanations using text, examples, step-by-step breakdowns and images when one explanation is not enough. • Progress tracking: goals, completed topics and weak areas shown in a simple dashboard. • Context-aware help: answers, concise revision points and practice questions that stay tied to the current subject and study context.

S.No.	Parameter	Description
3.	Novelty / Uniqueness	• Combines diagnosis, planning, learning support and progress tracking in one assistant instead of separate tools. • Adapts to learner status, study context, preferred format, progress and goals, not just to the question asked. • Uses Gemini's multimodal capability to explain the same concept in more than one way. • Works as a continuous loop: diagnose, plan, learn, practice, track and re-plan.
4.	Social Impact / Customer Satisfaction	• Gives students who cannot afford tutors or coaching on-demand, personalized guidance, improving equal access to quality learning. • Reduces confusion and exam stress and builds confidence and self-directed learning habits. • Saves time through clear explanations, achievable study plans and visible progress, which increases student satisfaction.
5.	Business Model (Revenue Model)	• Freemium: free core features (explanations, basic study plan, limited practice). • Premium subscription at a low student price: advanced progress analytics, unlimited practice questions and multimodal support. • Institutional licensing for schools, colleges and coaching centres, with teacher dashboards. • Partnerships with educational content providers.
6.	Scalability of the Solution	• Cloud-based and powered by the Gemini API, so it can serve a growing number of students without heavy infrastructure. • Works across subjects, grade levels and courses by changing the study context, without rebuilding the system. • Available on web and mobile, and can be extended to more languages. • Modular design allows new features and integration with school and college learning platforms.
